

Installing Firefox on Windows

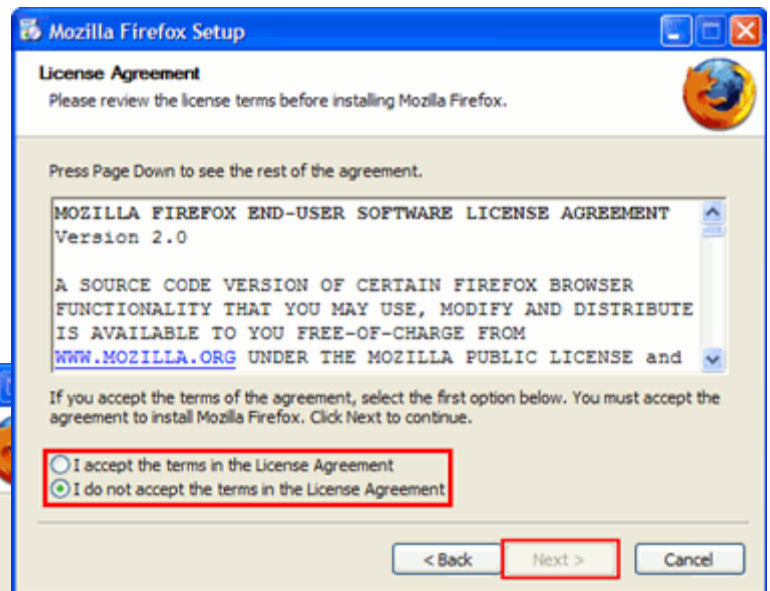

1. Visit the [Firefox download page](http://www.mozilla.com/en-US/firefox/) - <http://www.mozilla.com/en-US/firefox/> - in any browser (e.g. Internet Explorer). It will automatically detect the platform and language on your computer and recommend the best edition(s) of Firefox for you.

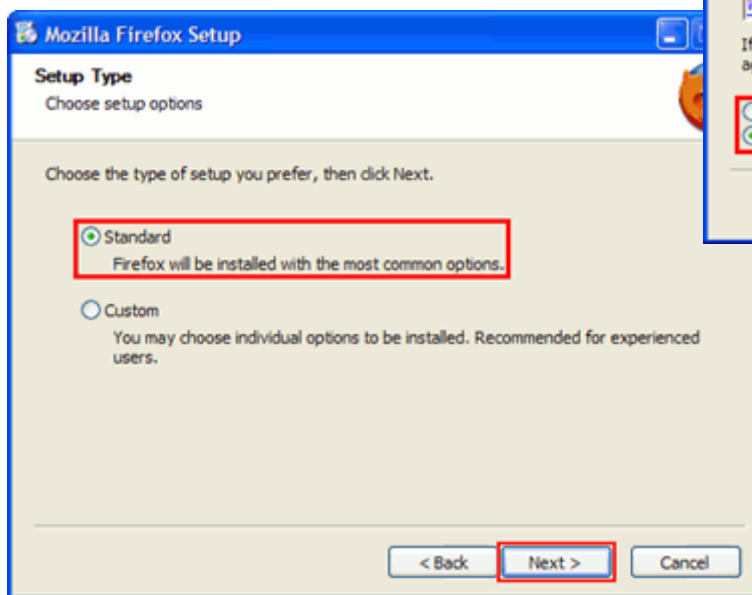

2. Download the setup file to anywhere on your computer. It is recommended that you exit all your other running programs. Double click the file to start the Firefox install wizard.

You will be greeted with a welcome screen. Click **Next** to continue.

3. Select the option "I accept the terms in the License Agreement" then click **Next** to go to the next step of setup.

4. Check the Standard setup type. Click **Next**. Copying of files to your computer will start. It can take a few minutes.

5. Once the copying of files is complete you can close the setup wizard by clicking **Finish**.

6. Check the "Launch Mozilla Firefox now," and Firefox will start for the first time immediately after you click **Finish**.

7. When you first start up Firefox, it will ask you if you want it to be your default browser, e.g., a link in your mail application, an Internet shortcut, or HTML document, will be opened by Firefox. Click **Yes** to set it as your default browser.

Congratulations, you are done installing Firefox!
